Project Overview

Title: Traffic Volume Analysis Dashboard (2012–2018)

Tools Used:

- Google Cloud Console
- SQL (Data Pipelines, Data Modeling)
- Tableau

Summary:

This dashboard was built to analyze traffic volume over seven years using three key dimensions: seasonality, weather conditions, and public holidays.

Project Objectives

- Identify monthly changes in traffic volume over the years
- Compare the impact of different weather conditions
- Understand how public holidays affect traffic levels

Key Insights & Visuals

- Line Chart: Showed yearly trends — a noticeable dip in July, possibly due to summer holidays.
- Bar Chart: Revealed that cloudy weather was associated with the highest traffic volume.
- Treemap: Highlighted that holidays like Thanksgiving and Labor Day had higher traffic compared to days like Veterans Day.
